SECTION 1 – QUIZ

CASE

A 34-year-old female with Recurrent Abortions presented to a gynecology outpatient clinic, with the chief complaint of recurrent miscarriage in the first trimester. The patient had normal menstrual cycle. No other significant medical and surgical history was present. Pelvic examination of the patient revealed single uterine cervical orifice. Ultrasound examination of the patient was done and the images are shown in Figure 1. Magnetic resonance imaging of the female was also performed [Figures 2 and 3].

WHAT IS YOUR INTERPRETATION?

Declaration of patient consent

The authors certify that they have obtained all appropriate patient consent forms. In the form the patient has given her consent for her images and other. The patient understands that her name and initials will not be published and due efforts will be made to conceal the identity, but anonymity cannot be guaranteed.

Financial support and sponsorship

Nil.

Conflicts of interest

There are no conflicts of interest.

Figure 1: Transabdominal ultrasound images of the right lumbar region (a) and the pelvis (b). Identify the structure marked with star

Figure 2: MRI of the abdomen and pelvis in Coronal plane. UB: urinary bladder, C: cervix, K: kidney; identify the abnormality pointed by star

Figure 3: Magnetic resonance imaging of abdomen in coronal plane with empty left renal fossa. Identify the abnormal structure in right renal fossa denoted by star
